

Introduction to Novari Identity Management V2 - NEW

Rachel Carmickle - 2024-08-30 - [Identity Management V2](#)

Novari Identity Management V2 is the updated version of the Administrator module, enabling you to manage your profile, as well as your Novari ATC users, locations, and permissions.

This app is currently in preview. If you encounter any issues, you can access the legacy app by clicking on the app launcher icon in the top right. Starting in July 2024, links from ATC ("User Profile" and "Administrator") will default to the new Novari Identity Management V2 application. The legacy app will remain available until at least September 2024.

While the functionality remains nearly identical, the layout has been reworked for improved ease of information access. The person and location pages have been streamlined and converted into scrollable pages, eliminating the need for tabs.

The screenshot displays the Novari Identity Management V2 interface. The left sidebar contains a navigation pane with options: User profile, Locations, and People. The main content area shows the 'User profile' for 'Tenant54 Tenant54', including sections for Person details, Account, and Security. Annotations highlight key features: 'Novari Identity Management opens to User profile', 'The new design can be used on different devices (not recommended for mobile devices)', 'App Launcher' (top right), 'User menu' (top right), 'Navigation pane', 'Select an item to go directly to that section', 'Collapse or expand the navigation pane', 'Scroll through the sections', and 'Sections are listed vertically to make it easier to scan and faster to navigate'.
