

Managing Requesting, Receiving and Service Types

Rachel Carmickle - 2024-05-16 - [Identity Management V2 \(NEW\)](#)

If the eRequest User Submits Requisitions

If the user will be submitting requisitions from this location, select Requesting types. The requesting types that are available have been configured during the Novari eRequest implementation phase.

Update Requesting Types

Requesting types are the kinds of requisitions a person can request. Only requesters with assigned types are searchable when creating a requisition.

Update Requesting Types

[Cancel](#)

Changes will only apply to this person at this location.

A person who is a requester generally doesn't receive requisitions.

If the eRequest User Receives Requisitions

Depending on how your organization's Novari eRequest pathways were configured, requisitions may be sent by requisition type or service type. An example of service types could be the various modalities in the Novari medical imaging solution Novari MIRM. An example of a requisition type could be surgery.

If the person at this location receives requisitions, select which types of requisitions if applicable. Specifying this for a person allows a sender to send a requisition directly to the person. The receiving types that are available have been configured during the Novari eRequest implementation phase.

Update Receiving Types

This person's receiving types indicate which requisitions can be routed to them directly. This setting only relevant when routing by requisition type (not service type).

Changes will only apply to this person at this location.

If the person at this location receives requisitions, select which types of services if applicable. Specifying this for a person allows a sender to send a requisition directly to the person. The service types that are available have been configured during the Novari eRequest implementation phase.

Update Service Types

This person's service types indicate which requisitions can be routed to them directly. This setting is only relevant when routing by service type (not requisition type).
