New Application Status Page

Rachel Carmickle - 2024-11-28 - [New Features](#)

We are excited to announce a new feature designed to enhance communication and transparency during critical incidents: **Application Status Page**

This page provides prompt updates on the status of our applications, including details on any ongoing incidents or disruptions. It will allow you to quickly check the health of our systems and stay informed as we work to resolve any issues.

Key Features:

- **Prompt Updates:** View the current status of all applications.
- **Incident details:** Access descriptions and updates on ongoing incidents.
- **No need to wait for emails:** Check status at any time, even outside of business hours.

You can access the Application Status Page at [Client status](#).

We believe this will provide you with quicker and easier access to important information.
